

CMSCD3005 — Software Systems: Planning & Design

Software Systems Design Methods

**"As part of our special promotion, with every sale
of technical jargon, we throw in a product."**

A haiku for the CAITLIN system

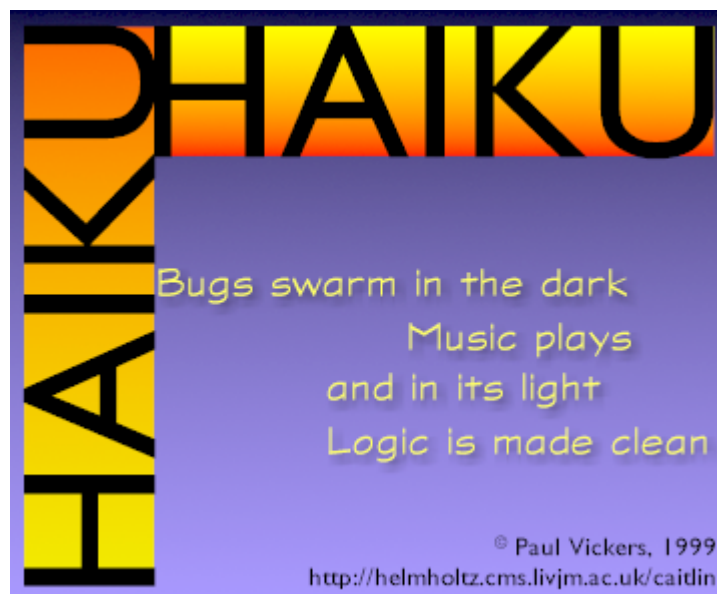

Table of contents

1. Historical Development of SSDMs.....	1
1.1. In Days of Yore.....	1
1.2. Early methods.....	2
1.3. Evolution.....	3
1.4. Methods/Methodologies.....	3
1.5. Stages in SSDM development.....	4
1.5.1. First generation methods.....	4
1.5.2. Second generation methods.....	5
1.5.3. Third generation methods.....	5
1.6. The Conventional (NCC) Approach.....	5
1.7. Exercises.....	8
2. Jackson System Development.....	9
2.1. An Overview.....	9
2.1.1. Extension of JSP.....	9
2.1.2. Theoretical Foundations.....	9
2.1.3. Real World Modelling.....	9
2.1.4. Limitations.....	9
2.1.5. JSD and Maintainability.....	9
2.1.6. JSD Stages.....	9
2.2. Modelling Phase.....	10
2.2.1. The entity in JSD.....	10
2.2.2. The Steps.....	10
2.2.3. Documentary Output.....	10
2.3. Network Phase.....	11
2.3.1. The Steps:.....	11
2.3.2. Initial Model Phase.....	11
2.3.3. Elaboration Phase:.....	12
2.4. Implementation Phase.....	14
2.4.1. Documentary Output:.....	14
2.5. JSD Notation.....	15
2.6. Exercises.....	15
3. JSD Modelling Underlying Ideas.....	17
3.1.1. The Scope of JSD.....	17
3.1.2. Towards More Maintainable Systems.....	17
3.2. Modelling the Real World.....	17
3.2.1. Modelling Before Functions.....	17

3.2.2.	Simulation of Objects in the Real World.....	19
3.2.3.	The Validity of the Outputs	19
3.3.	The Need for a High Quality Model	19
3.3.1.	Accuracy for the Intended Purpose	19
3.3.2.	The Model Must be Understood by Users.....	19
3.3.3.	Models of the Real World	20
3.3.4.	Careful Modelling.....	20
3.4.	Data Modelling.....	20
3.4.1.	The Entity Relationship Model.....	20
3.4.2.	Real world events	21
3.5.	Events in JSD	21
3.5.1.	Event Attributes	21
3.5.2.	Event Types or Classes	21
3.5.3.	The Importance of Events.....	22
3.6.	Objects, Entities and Event Orderings.....	22
3.6.1.	Choosing Entity (or Object) Classes	22
3.6.2.	Event History.....	22
3.6.3.	Entity Diagrams	23
3.6.4.	Identifying Entities	23
3.7.	Entity Attributes.....	24
3.7.1.	Entity States.....	24
3.7.2.	Specifying Entity Attributes	24
3.8.	Exercises.....	24
4.	The JSD Modelling Stage	27
4.1.	Definitions.....	27
4.1.1.	Entity.....	27
4.1.2.	Action	27
4.1.3.	Examples.....	27
4.2.	Finding Entities From a Statement of Need.....	28
4.2.1.	Guideline For Discovering Entities	28
4.2.2.	Refining the Candidate List of Entities	28
4.3.	Describing Actions	29
4.3.1.	Guidelines for Determining Actions.....	29
4.3.2.	Action Attributes	29
4.3.3.	Allocating Actions to Entities	29
4.4.	XYZ Warehouse Co. A Case Study.....	30
4.4.1.	Finding Entities.....	30
4.4.2.	Finding Actions.....	31
4.4.3.	Deriving Action Attributes.....	32

4.4.4.	Allocating Actions to Entities	33
4.4.5.	Final Entity List	34
4.5.	Producing Entity Structures	35
4.5.1.	What Are We Showing With Entity Structures.....	35
4.5.2.	Backtracking in Entity Structures	36
4.5.3.	Marsupial Entities	37
4.6.	How to Produce Entity Structure Diagrams	37
4.6.1.	An Example.....	38
4.6.2.	Order the actions	38
4.6.3.	Add selections and iterations.....	38
4.6.4.	Search for Uncertainty.....	39
4.7.	Case Study XYZ Warehouse	39
4.8.	Producing Structure Text.....	42
4.8.1.	Sequence	42
4.8.2.	Selection	42
4.8.3.	Iteration	43
4.8.4.	Putting it Together	43
4.8.5.	Solutions.....	44
4.9.	Exercises.....	44
5.	The Network Stage Initial Model	47
5.1.	The System Specification Diagram (SSD).....	47
5.2.	Basic Notation.....	48
5.2.1.	Process.....	48
5.2.2.	Data Stream.....	48
5.2.3.	State-Vector	48
5.3.	Some Examples of SSD Components and Connections.....	48
5.4.	Data stream Connection.....	49
5.4.1.	Rules for the Placement of Reads and Writes	50
5.4.2.	Example	50
5.4.3.	Data stream Connection Characteristics Summarised.....	51
5.5.	Merging Data Streams	51
5.5.1.	Rough Merge.....	52
5.5.2.	Fixed Merge	53
5.6.	State Vector Connections	54
5.6.1.	State Vector connection characteristics summarised.....	55
5.6.2.	Difference between state vectors and data streams.....	55
5.7.	The Initial Model Phase and the Case Study	56
5.8.	The Initial Model	57
6.	Network Stage Elaboration Phase.....	59

6.1.	Adding Detail to the SSD	59
6.1.1.	Input and Output Subsystems.....	59
6.1.2.	Stability of the Model Processes	59
6.2.	Adding Functional Processes	59
6.2.1.	Embedded Functions.....	59
6.2.2.	Imposed Functions	60
6.2.3.	Some Examples of Impose Functions.....	60
6.2.4.	Interactive Functions	61
6.2.5.	Filter Functions	61
6.2.6.	A Word of Warning.....	63
6.3.	Adding Time to the Model.....	63
6.4.	Adding Functions to Our Case Study.....	64
6.4.1.	Information Functions	64
6.4.2.	Major Functions.....	67
7.	JSD Implementation Stage	69
7.1.	Implementation Strategy	69
7.1.1.	How Many Processors are to be Used?.....	69
7.1.2.	Real-Time or Batch?.....	69
7.1.3.	Will a Scheduler be Required?.....	69
7.2.	System Implementation Diagram	69
7.3.	Scheduler Processes.....	71
7.4.	Process Inversion.....	72
7.5.	Transforming from System Specification to System Implementation	74
7.5.1.	Resolution of Data Streams	74
7.5.2.	Further Example 1	75
7.5.3.	Further Example 2	77
7.5.4.	State Vector Separation	77
7.5.5.	Implementing the Case Study.....	78
7.6.	Coding.....	83
8.	Yourdon Systems Method (YSM).....	85
8.1.	Introduction	85
8.2.	Role of models in YSM.....	85
8.2.1.	Enterprise and System in YSM.....	86
8.2.2.	Viewpoints of the system	86
8.3.	Outline of method	87
8.4.	Enterprise Essential Model.....	87
8.5.	System Essential Model	87
8.6.	Further reading	88
9.	Gane & Sarson s STRADIS	89

9.1.	Overview.....	89
9.2.	The Initial Study.....	89
9.3.	The Detailed Study.....	89
9.4.	Defining and Designing Alternative Solutions.....	90
9.5.	Physical Design.....	91
9.6.	Subsequent Phases.....	92
9.7.	Exercises.....	92
10.	Information Engineering.....	93
10.1.	Overview.....	93
10.2.	Information Strategy Planning.....	93
10.3.	Business Area Analysis.....	95
10.4.	Business System Design.....	96
10.5.	Technical Design.....	98
10.6.	Construction.....	99
10.7.	Transition.....	99
10.8.	Production.....	99
10.9.	Exercises.....	100
11.	Structured Systems Analysis and Design Method (SSADM).....	101
11.1.	Overview.....	101
11.2.	Feasibility Phase.....	101
11.2.1.	The Problem Definition Stage.....	102
11.2.2.	The Project Identification Stage.....	102
11.3.	Analysis Phase.....	102
11.3.1.	The Analysis of the Current System Stage.....	102
11.3.2.	The Specification of the Required System.....	103
11.3.3.	Reviewing the required system specification.....	103
11.3.4.	Selection of Technical Options Stage.....	103
11.4.	Design Phase.....	104
11.4.1.	Detailed Data Design Stage.....	104
11.4.2.	Detailed Procedure Design Stage.....	104
11.4.3.	Physical Design Stage.....	104
11.5.	Exercises.....	105
12.	What method?.....	106
12.1.	Introduction.....	106
12.2.	Method.....	106
12.2.1.	Constrained Environments.....	107
12.2.2.	Open Environments.....	107
12.3.	The Principle of Dispassionate Methodology.....	107
12.4.	The Principle of Close-Fitting Frames.....	108

12.5. The Principle of Frame Exploitation108
12.6. The Principle of Deferred Invention109
12.7. The Principle of Beneficent Difficulty.....109
12.8. Summary109

"It didn't work out. I'm a Macintosh Classic and he's an IBM clone."
